

# QLogic Adapters for Dell Servers

## QLogic: The Fibre Channel Adapter of Choice in the Data Center

### Why QLogic?

#### Market Leadership

QLogic® is the undisputed leader in Fibre Channel Host Bus Adapters. The QLogic market share figures validate that the company is making the right technology and engineering investments and executing well with our growing customer base. Enterprise customers worldwide continue to depend on Fibre Channel networks to run their high performance storage applications. With 16Gb Fibre Channel products on the horizon, Fibre Channel continues to meet the performance demands of insatiable storage applications that require reliable and proven high-performance storage bandwidth.

#### Strategic Alignment

QLogic is strategically aligned with Dell® in multiple areas. Customers are familiar with QLogic Host Bus Adapters, and Dell is one of our top OEM partners. QLogic is also trusted by Dell to provide

strategically embedded products. For example, the same technology used in our market-leading QLogic adapters can also be found in “target mode,” providing native connectivity for Compellent array controllers. In addition, selected product families from QLogic’s networking portfolio are also available via Dell S&P, stackable switches for Fibre Channel fabrics, and Intelligent Storage Routers for data migration, SAN-over-WAN disaster recovery, and remote office connectivity.

#### Solutions Innovation

With the launch of the QLogic 8200 Series Converged Network Adapters, QLogic and Dell are driving next-generation I/O and virtualization solutions for converged networks. The 8200 Series features Switch Independent Partitioning, which is used to create virtual ports running multiple protocols across the same physical connection. QLogic’s unique switch-agnostic implementation means Dell customers are not tied to a specific switch platform to realize the benefits of virtualization in converged network environments.
